

Experience

Experience is the keystone of our foundation. We are dedicated to providing quality designed trusses to the construction industry.

Dependability

You can depend on our experience, our quality and commitment to deliver your custom-built trusses on time and at a fair price.

We understand the ongoing changes in building trends and are quick to respond to your needs.

Quality

We buy our lumber from only the top quality lumber mills in the country. We choose our lumber by hand, and each piece is inspected to pass our high-quality standards. This minimizes defects and provides each builder with trusses that will last the life of the project.

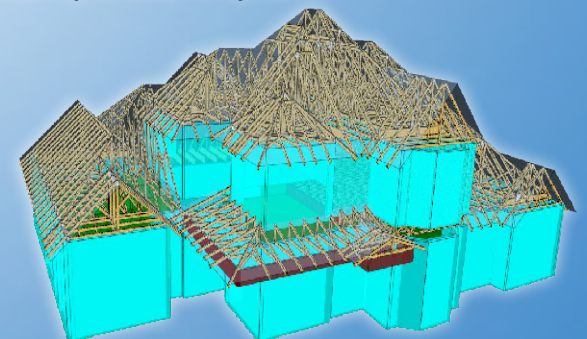

Mission

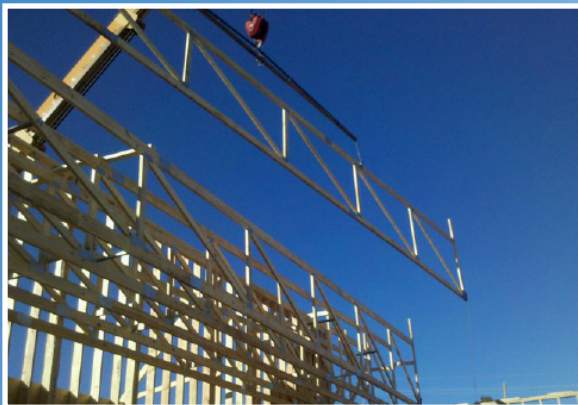

We provide contractors and their customers with outstanding customer service and products. We will do whatever it takes to ensure the building goes up without a hitch.

Engineering

The CAD-based design software we use from ITW Building Components Group generates traditional plan view layouts and 3-D graphics that give an accurate picture of a structure from virtually any perspective by showing every component in place.

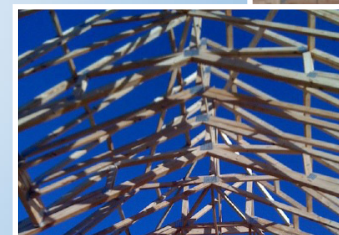

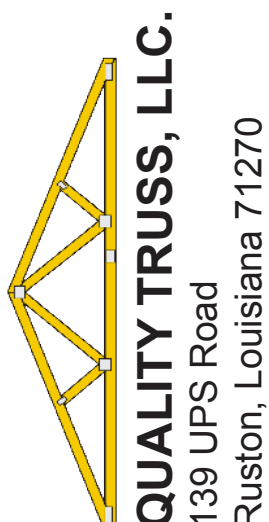

The Benefits of Components

- Components are used in more than 75% of all homes built in the U.S. today.
- Quick installation time.
- Engineering expertise.
- Factory built - not jobsite built - to assure quality and the right fit.
- Efficient use of available materials.
- Reduces jobsite waste.
- Minimizes jobsite theft.
